

Run your AI LangChain on AWS

Martin Müller

Who am I?

MartinMueller.dev/Resume

Summary

office@martinmueller.dev

Passionate Full Stack Developer. I like to have a broad collection of skills. From developing the backend and frontend applications written in Java, JavaScript, or any other language, to developing a cost-optimized cloud infrastructure solution. An enthusiastic agile player with strong communication skills. Looking for taking on new challenges and learning new technologies.

"What I don't know, I will learn"

Highlights

- AWS Professional Solution Architect certified 
- AWS Community Builder
- TypeScript, Java, JavaScript, Angular, React
- AWS Lambda, EC2, CDK, DynamoDB and many more
- Maven, Gradle, SQL, ElasticSearch
- Docker, Kubernetes, Helm
- Spring, GitHub (Actions), Travis, GitLab, BitBucket

Experience

AWS Community Builder
Mar 2022 - current

AWS Consultant
Nov 2020 - current

- Helping startups into the AWS Cloud
- Leveraging AWS CDK to manage AWS resources

Senior Cloud Architect - www.kreuzwerker.de, GER
Jan 2022 - May 2022

- Together with the customer building awesome AWS cloud solutions

Agenda

01

**What is
LangChain?**

03

**LangChain
Demo**

02

**Why run it
on AWS?**

04

Reflecting & QA

Disclaimer!

- I'm not a Data Engineering or ML expert! I'm an AWS DevOps Full-stack engineer!
- LangChain is super new to me.

01 What is LangChain?

What is LangChain?

- Cohesive framework for interacting with multiple LLM models
 - I love the abstraction on top of like OpenAI
 - Extends the possibilities you can do with LLMs by a lot!
- Python library <https://github.com/hwchase17/langchain>
- JavaScript library <https://github.com/hwchase17/langchainjs>
- Has cool features like:
 - **Chains** - Sequence of LLM calls. Even across multiple LLMs.
 - **Memory** - Persisting state (like conversations) between calls of a chain/agent.
 - **Agents** - Involve an LLM making decisions about which Actions to take.
 - **Vector Machines** - “Train” the LangChain LLM with your specific data

02 Why run it on AWS?

Why running it on AWS?

- Your laptop isn't production ready! You will need an external service like AWS to run your AI app.
- AWS offers an amazing set of Serverless services you easy can integrate like:

S3

Cloudfront

DynamoDB

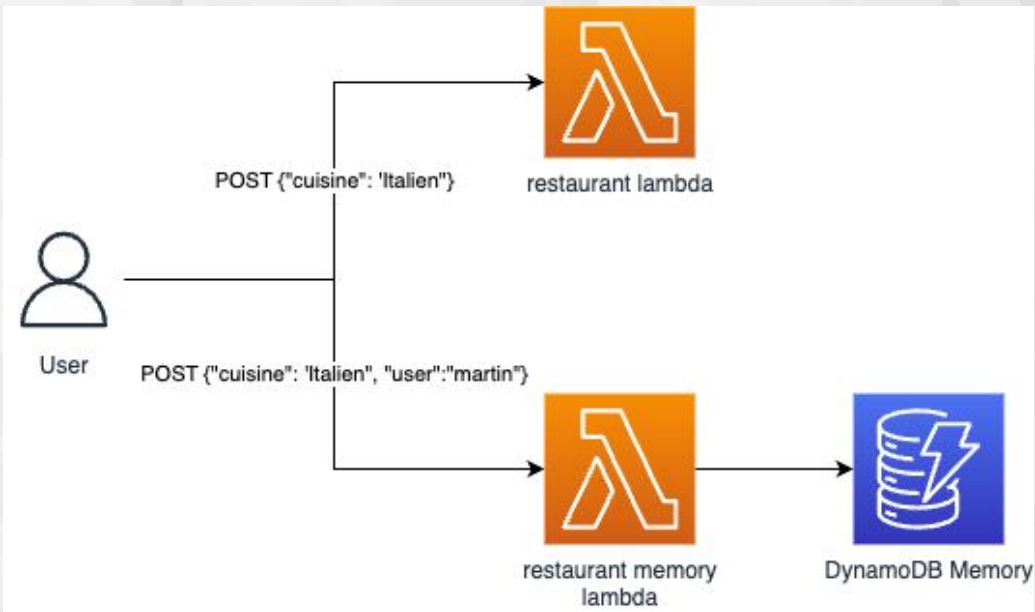

RDS
(Relational
Database
Service)

03 LangChain Demo

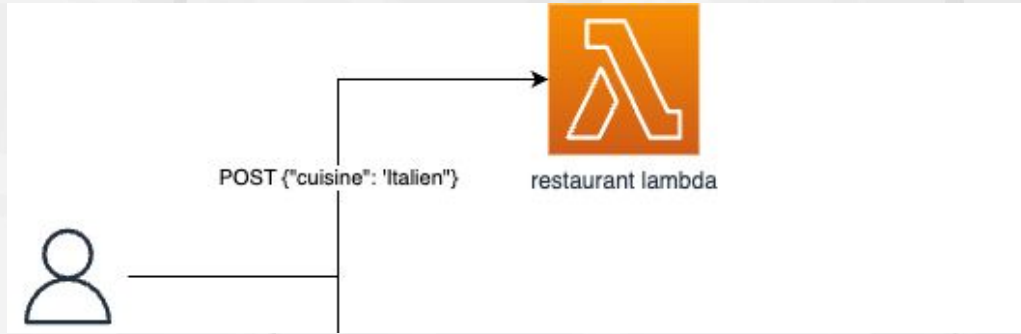

LangChain Demo

<https://github.com/mmuller88/aws-ts-langchain>

LangChain Demo

<https://github.com/mmuller88/aws-ts-langchain>

Prompt 1: I want to open a restaurant for {cuisine} food. Suggest a fancy name for this.

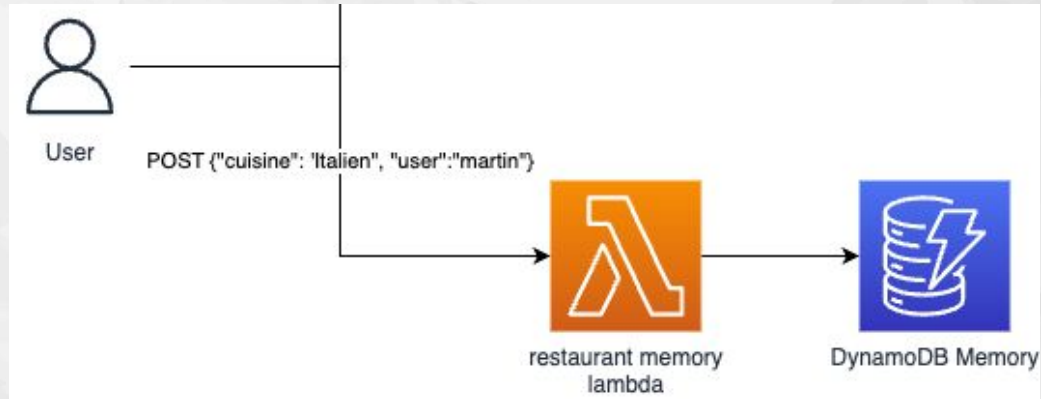

Prompt 2: Suggest some menu items for {restaurant_name}. Return it as a comma-separated string.

Those two prompts are chained and will return the name for the restaurant and suggestions for menu items.

LangChain Demo

<https://github.com/mmuller88/aws-ts-langchain>

Prompt: I want to open a restaurant for {cuisine} food. Suggest a fancy name for this.

04 Reflecting

- LangChain is super cool and fun.
- The library is early so you will encounter limits/problems.
 - Reach out to the LangChain Discord Community! <https://discord.gg/nTWCmrtWdp>
 - Perfect opportunity to contribute!
 - DynamoDB sortkey doesn't seem to be properly implemented. Perhaps will write a PR.

Need help with your AI work loads?
Contact me :) !

04 QA

MartinMueller_

martinmueller.dev

office@martinmueller.dev

Why TypeScript?

- Similar like AWS CDK you have multiple languages to gain more attraction to a broader audience.
- TypeScript typing is amazing. I miss a similar experience in Python. Though IntelliSense makes Python quite powerful as well.
- And I think that LangChain libraries are rather thin layers on top of like LLM APIs like OpenAI so that makes it easier to offer a broader SDKs.
- OpenAI offers a TypeScript / JavaScript SDK as well.

What is AWS?

- Amazon **Web Services**
- Part of Amazon
- Offers services for Storage, Compute, Content Delivery and many more

EC2

Lambda

S3

Cloudfront

What is AWS?

- Amazon Web Services
- Part of Amazon

EC2

Lambda

S3

Cloudfront

- Access with AWS Console, CLI, SDK (Python, TypeScript, ...)

```
You, 18 hours ago | author (You)
1 import AppsyncClient from 'appsync-client';
2 import * as lambda from 'aws-lambda';
3
4 const { TABLE_NAME } = process.env;
5
6 const USER_ID = 'd0a5517a-9088-487e-aec6-fbd7b3696363';
7
8 import * as AWS from 'aws-sdk';
9 import { CreateDeviceDocument, DeviceType } from './lib/api';
10 const docClient = new AWS.DynamoDB.DocumentClient();
11 const { APPSYNC_URL } = process.env;
12
13 const client = new AppsyncClient({ apiUrl: APPSYNC_URL });
14
15 /**
16  * @param event
17  * @returns
18  */
19
20 export async function handler(event: lambda.UserMigrationTriggerEvent) {
21   console.debug('event: ${JSON.stringify(event)}');
22
23   const params: AWS.DynamoDB.DocumentClient.QueryInput = {
24     TableName: TABLE_NAME,
25     KeyConditionExpression: 'id = :id',
26     ExpressionAttributeValues: {
27       ':id': 'USER_${USER_ID}',
28     },
29   };
30 }
```

What is AWS?

- Big server buildings around the world

Frankfurt (Main) eu-central-1

What is AWS?

- Redundant buildings per region for better availability

What is AWS?

- Alternative Cloud Provider are:

- BTW you are probably using AWS already indirectly
The tool/service you are using is probably build in the cloud!

Why use it? (Company)

Outsourcing:

- Almost every company has an IT department
- Outsource IT hardware for reducing cost
- Migrate to cloud native / serverless offers done

correctly improves aspects of:

- Performance
- Security
- Operational Excellence
- Costs
- Reliability
- Sustainability

Why use it? (Startup)

Greenfield:

- Having a cool SaaS business idea?
- AWS Cloud is the perfect place to implement it!
- Don't worry about IT hardware
- Pay as you go. If you use the cloud less you pay less

Startup friendly:

- Apply for AWS Active and get \$100k credits

Why (not) use it?

- Lock-in
- Inexperience can cost you
 - Use AWS Courses to learn!
 - AWS certificates are super helpful

Available AWS Certifications

FOUNDATIONAL

Six months of fundamental AWS Cloud and industry knowledge

PROFESSIONAL

Two years of experience designing, operating, and troubleshooting solutions using the AWS Cloud

ASSOCIATE

One year of experience solving problems and implementing solutions using the AWS Cloud

SPECIALTY

Technical AWS Cloud experience in the Specialty domain as specified in the exam guide

aws  certified
Updated February 2022

03 Why I love it!

Why I love it!

- I can offer my expertise to earn money as a freelancer to buy food
- Helps me to evaluate and implement my startup ideas
- The developer experience is amazing and super satisfying
- Having amazing AWS communities to help and learn from each other
- If you need help with the cloud look on:
 - hire in those communities!
 - Upwork.com
 - Ask me :)
